Forward Looking Statements

Except for historical information contained herein, this presentation may contain forward looking statements including but not limited to comments regarding predictions and projections. Forward looking statements address future events and conditions and therefore involve inherent risks and uncertainties. Although Power Nickel Inc. believes that such expectations are reasonable, there can be no assurance that such expectations will prove to be correct, and therefore actual results may differ materially from those currently anticipated in such statements. You are cautioned not to place undue reliance on any such forward looking statements, whether made in this presentation or in any question and answer period related to this presentation.

Kenneth Williamson, Geo, M.Sc., VP of Exploration of Power Nickel is the Qualified Person who has reviewed and approved the technical disclosure in this presentation.

Top 5 Reasons to Invest in Power Nickel Now

- 1 The Exciting Exploration Results on our Copper, Silver, PGM zone will act as Investor Catalyst.
- 2 Our Relationship with CVMR is evolving, from them doing a Feasibility study to something much more.
- 3 North American Nickel is different and worth a lot more than Nickel elsewhere.
- 4 Commodity Markets are turning up and now is the time to invest.
- 5 We are in best jurisdiction in world to explore and develop a mine.

NISK – New 43-101

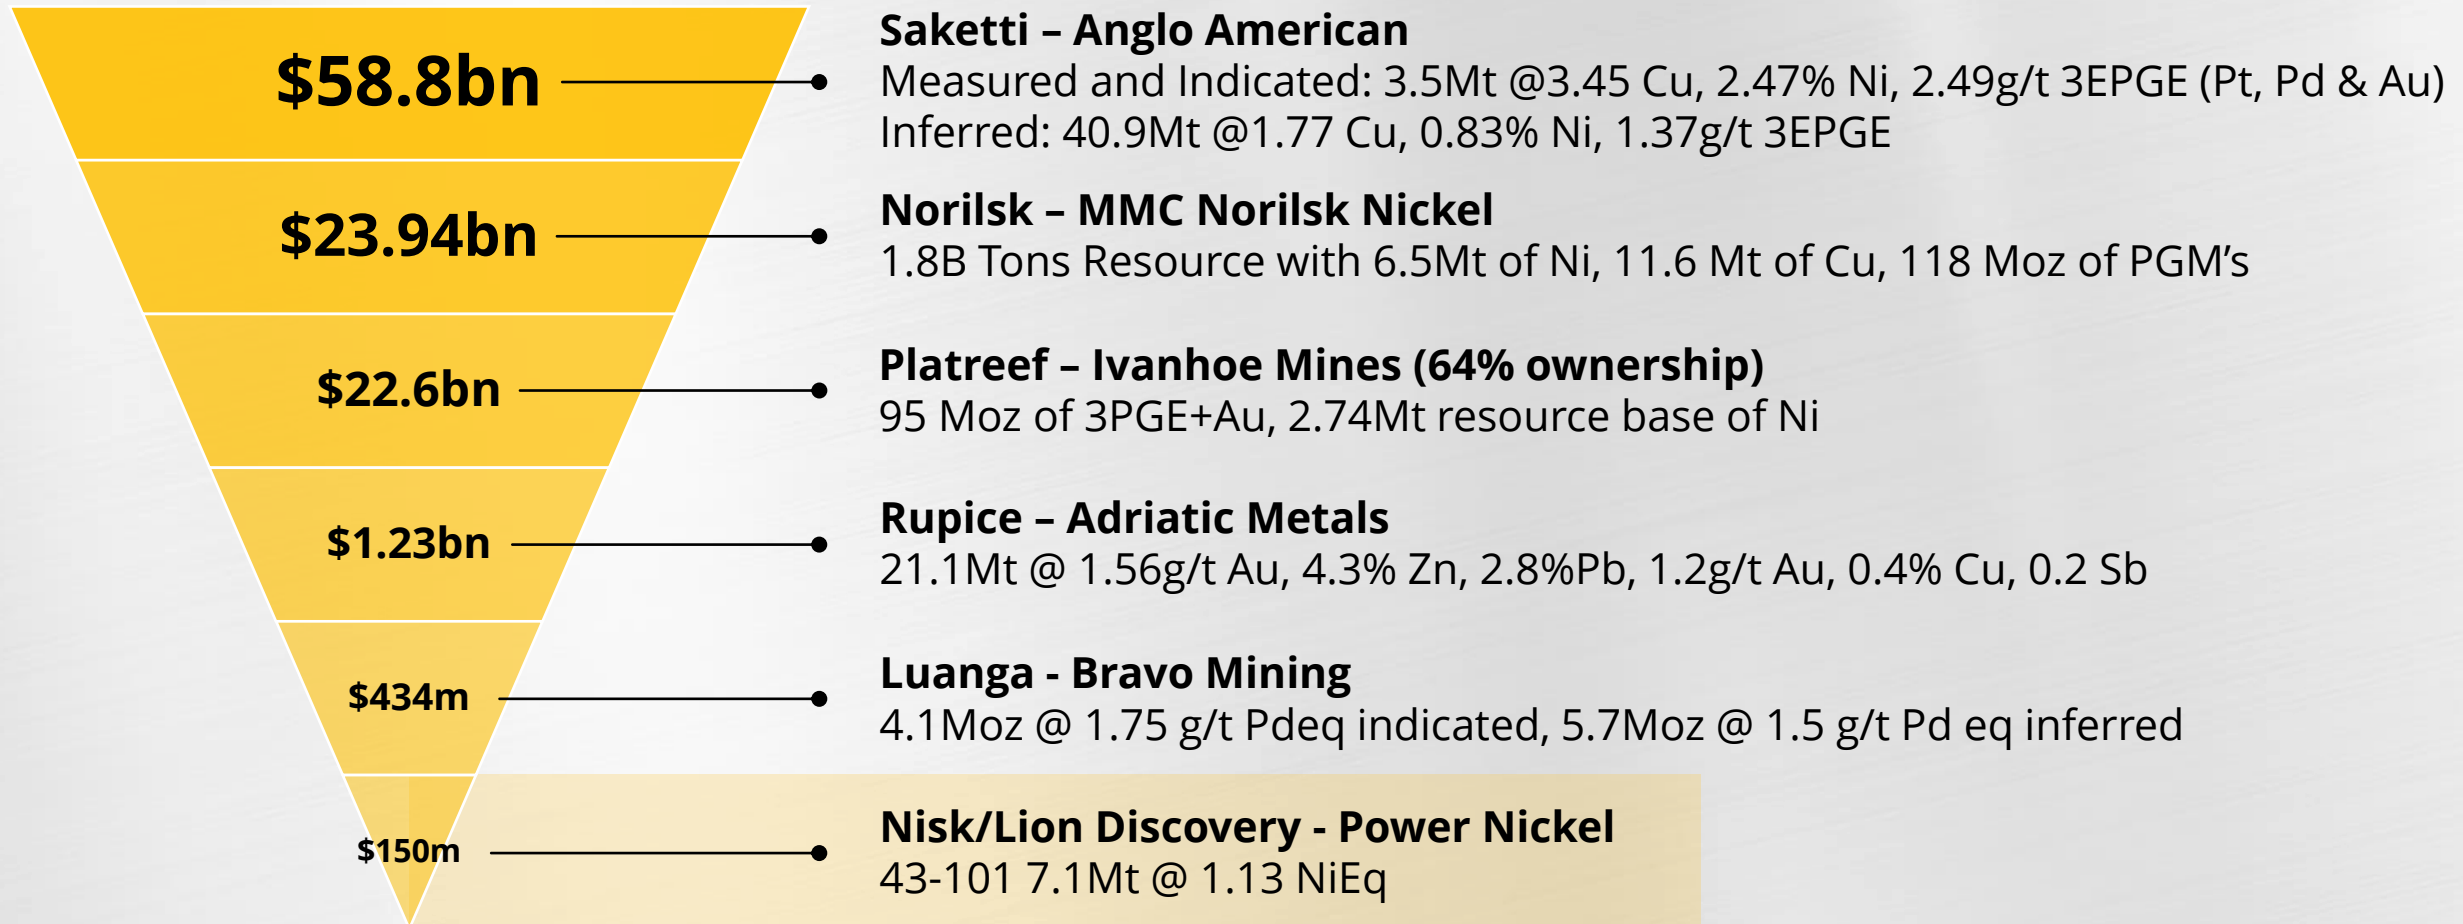

Mineral Resource Estimate Announced Nov 29, 2023

The information regarding the NISK 1 deposit is derived from the content of the Press Release dated November 29th: **Power Nickel Releases Initial NI 43-101 Resource on Nisk Project.** The 2023 MRE was prepared under the leadership of Pierre Luc Richard, Duncan Studd, Gordon Mars and Jeffrey Cassoff. The Technical Report will be filed on Sedar within 45 days of the release date. This table has a number of important assumptions spelled out in detail on the press release. We caution that the **Notes to Table 1** should be read to provide proper context.

Poly Metallic Matrix

As of June 26, 2024

All figures are Canadian Dollars (\$).

Industry Invests – Feasibility Study

- CVMR Study to de risk Commercialization of Nisk
- CVMR process enables higher and broader metal yields
- CVMR finished products achieve 2-3x LME Price
- CVMR most environmentally friendly way to make Nickel
- CVMR recycling completes Cradle to Grave to Cradle

Refinery Profits

CVMR CARBONYL PROCESS APPLICATION TO LATERITE ORE

- CVMR's process for refining of Ferralite and Sprolite ore maximizes value of the ores by producing value added products.
- A typical Ferralite ore contains 40-45% of Iron, 1-1.5% of Nickel, 0,04-0.10% of Co (potentially Copper, PGE and Rare earth elements).

Typical value of ore realised by hydrometallurgical process
\$254.80 per ton

Value of ore using CVMR's refining process
\$448.30 per ton

Value of ore by producing high premium products using CVMR's Refining Process
\$587.10 per ton

Value of ore by producing high premium products, and concentrating PGE using CVMR's Carbonyl Process
\$672.60 per ton

NA Nickel Is More Valuable - Here is Proof

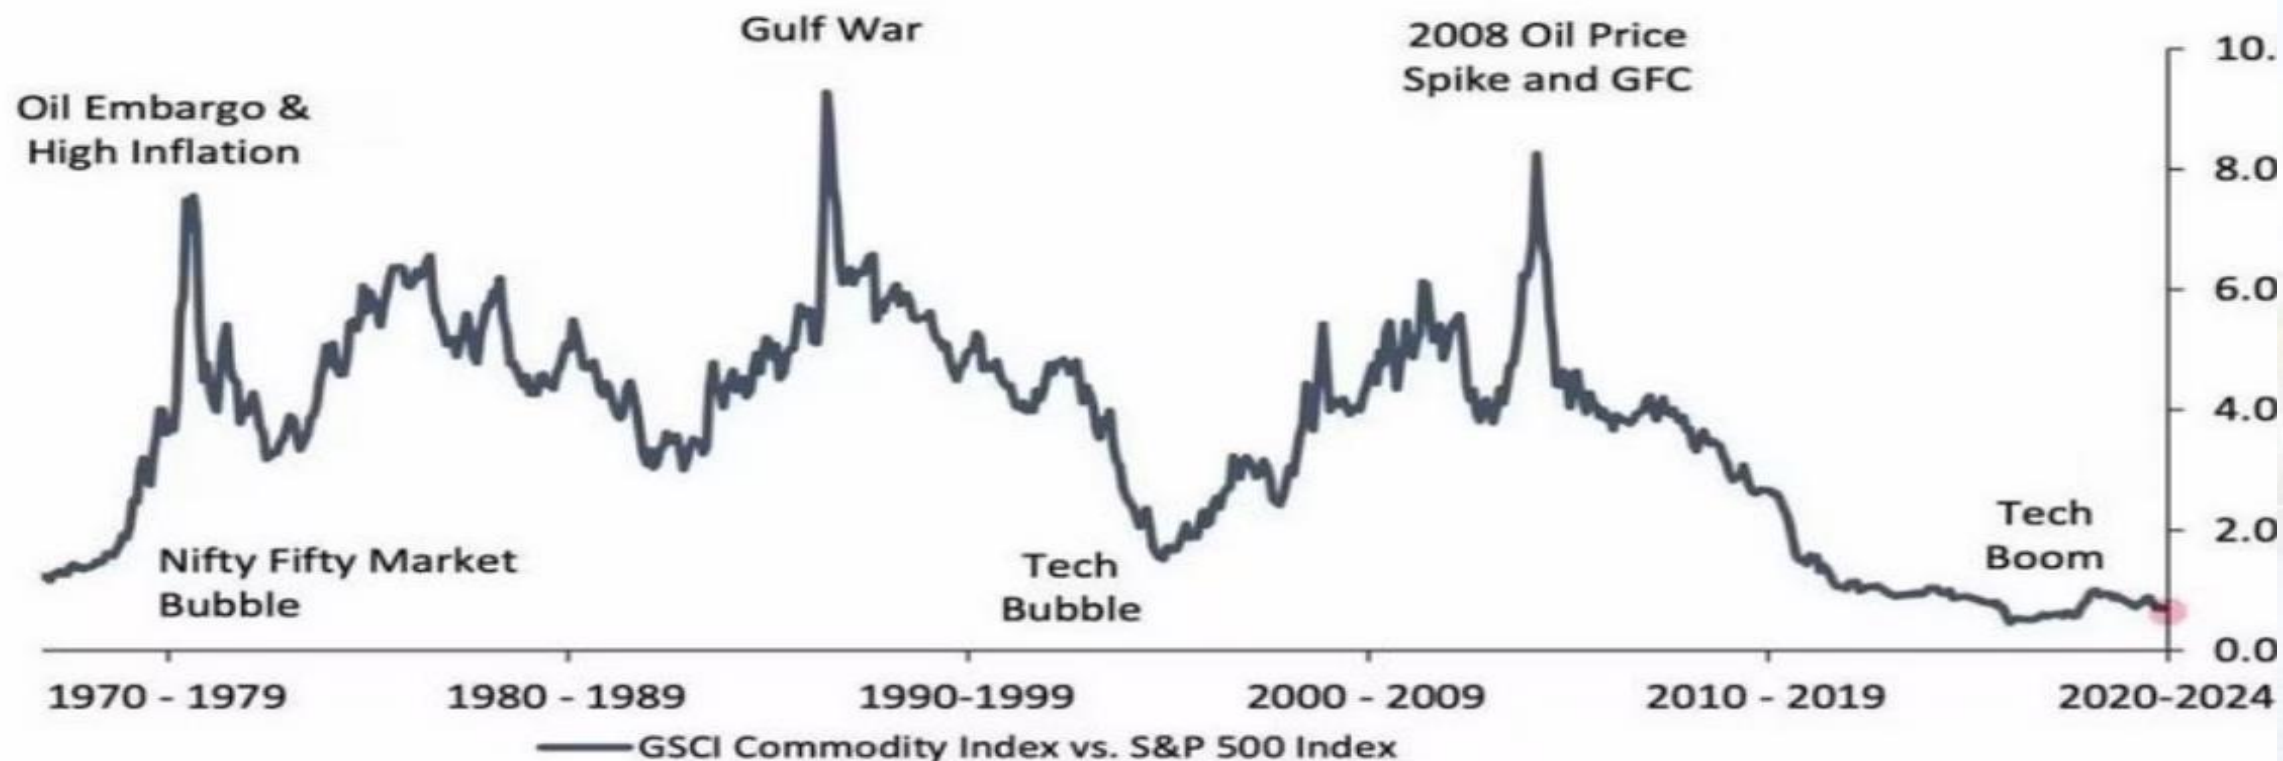

A screenshot of a web browser displaying a news article from the Toronto Star. The page has a blue header with the 'TORONTO STAR' logo. Below the header is a navigation bar with various categories like HOME, GTA, CANADA, etc. The article is titled 'Korean battery maker Samsung SDI investing in Canada Nickel' and is categorized under 'BUSINESS'. The text of the article states that Samsung SDI Co. Ltd. has agreed to invest US\$18.5 million in Canada Nickel Co. Inc. for an 8.7 per cent stake. The article is attributed to 'The Canadian Press' and dated 'Friday, January 12, 2024'. At the bottom of the browser window, a taskbar is visible with various application icons and a system clock showing 6:14 PM.

Commodities – Outsized Moves Are Coming

Quebec Canada

A Top Tier Location

Nisk Main and Lion Discovery are high-grade polymetallic mineralizations for multiple battery metals including Nickel, Copper, Cobalt, Palladium and Platinum.

Located in Quebec, Canada NISK benefits from:

- ✓ Generous tax credits that cover 50% of exploration and development costs.
- ✓ Stable political environment with strong government and first nation partners.
- ✓ Hydro-Quebec substation across the road supplying low-carbon inexpensive hydropower.

NISK – World's First Carbon Neutral Nickel

Offset Drilling CO2 — Done Karbon X — Verra Certified

Utilize Green Hydro Power to Provide Energy For Mining - Planned Use

Environmentally Friendly Processing Design - Planned

Ultramafic Tailings Naturally Sequester CO2 - Verification TBD

CO2 Footprint Will Be Audited & Reported - Planned

Cleaner Nickel Will Yield Higher Prices

Cutting Edge Technology

Ambient Noise Tomography (ANT)

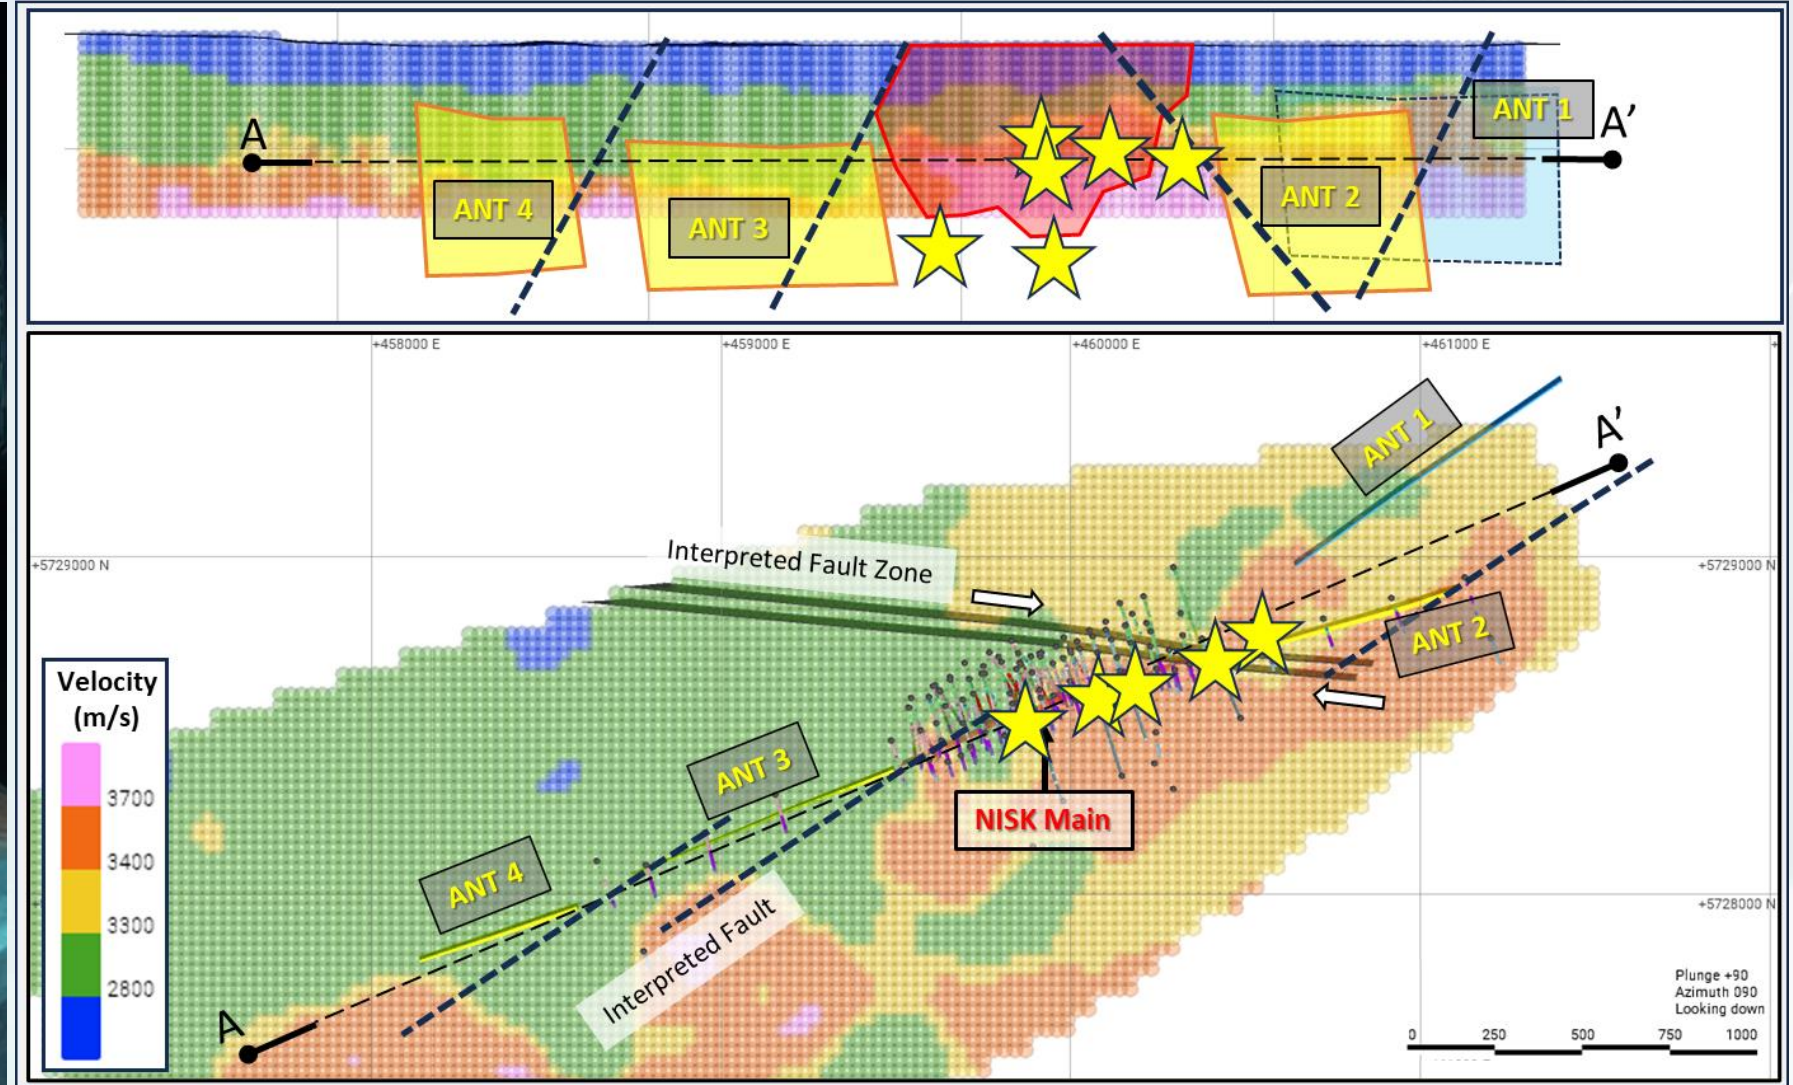

Power Nickel has partnered with Australian-based Fleet Space Technologies, a developer and operator of a constellation of microsatellites that delivers universal connectivity across the globe, including the exploration of Nickel ore deposits at its NISK project. Power Nickel will use innovative sound mapping technology from Fleet Space to locate additional high-grade nickel sulfide deposits with a greater level of accuracy.

The satellite-enabled earth scanning technique is called Ambient Noise Tomography (ANT). Battery-powered devices known as 'Geodes', which can be transported by hand, are used to capture background vibrations from natural and man-made sources. The data can be used to develop a full 3D visualization of the subsurface down to 2 km in depth. With Fleet's Geodes being up to 10x more sensitive than existing nodal geophones, the exploration team can get a clear, rich image of what resources may be below ground in a period that can be as short as four days.

Historically nickel sulfide deposits are located in the form of pods in a geographic area. It is expected that the nickel ore deposits at NISK are also in the form of such pods. Currently, Power Nickel is exploring 1 square kilometer of its 45 square kilometer land package. Using Fleet Space's earth scanning technology, Power Nickel hopes to optimize its chances of finding additional deposits and increase its drilling accuracy as part of a well-developed drilling program.

0.032	Inferred	141,595	0.027	84,000	0.16	506,000	0.065	0.071
0.036	Indicated	141,848	0.045	141,000	0.13	394,000	0.013	0.079
0.036	Inferred	105,675	0.028	65,000	0.18	417,000	0.068	0.077

Molybdenum equivalent (MoEq) grades are calculated using the following formula: $MoEq (\%) = Mo(\%) + 1.35 \cdot (Cu (\%) \cdot 2.3 / (Mo(\%) \cdot 12.65 - 1.14))$. The formula assumes a selling cost of US\$1.14/lb for Mo and metallurgical recoveries of 84% for Cu and 62% for Mo. Source Videla, 2009, corroborated by AMEC (2009) NI 43-101.
